

## Question:

### Describe a HL (High Level) roadmap for your product

A high-level roadmap for my product is a visual summary that maps out the vision and direction of my product offering over time. The roadmap communicates the why and what behind what we are building. It is a guiding strategic document as well as a plan for executing the product strategy.

Building the **Visual Search** roadmap for my frontend engineer intern takes the following process

- Stories
- backlog
- Sprint

### Visual Search User Story

As a ( <i>User Role</i> )	I want to ( <i>activity</i> )	So that ( <i>Value/Goal</i> )
As a user	I want to see a camera icon inside the right-end of the search bar	So that i can know it for image search
As a user	I want to be able to click on the icon	So that i can upload the image
As a user	I want to see uploading options	So that i can decide if i want to select the upload from my saved files or capture immediately with my camera
As a user	I want to see my upload search automatically after selecting my image	So that I don't have to click on a search button after the upload to commence the search
As a user	I want to get search results alongside with similar results	So that I can make my choices from similar products in an instance I don't get the exact product I want
As a product owner	I want to be able to know the user metrics	So that I can know if the feature is worth keeping or not.
